Osteoporosis hits even the young Pakistani women

The prevalence of osteoporosis and osteopenia is high, especially among young Pakistani women, and is associated with modifiable risk factors.

Fatima M, Nawaz H, Kassi M, Rehman R, Kasi PM, Kassi M, Afghan AK, Baloch SN. Obs & Gyn Depp BMC Quetta

Osteoporosis-A major threat to the Pakistani nation

An estimate based on an ultrasound study of 171 788 subjects across Pakistan, puts the number of people with osteopenia at 40 million (almost equal numbers of men and women), with almost 10 million having osteoporosis. In another, smaller study, again using ultrasound on women aged 45-70 years the prevalence of osteoporosis and osteopenia was found to be 16 and 34% respectively. Sultan A, Khan D A, Mushtaq M, Hassan MU. Frequency of osteoporosis and its associated risk factors in postmenopausal women in clinical practice at Rawalpindi.
